Education

B.Tech — Computer Science Engineering (AI & ML) | VIT Vellore | Aug 2024 – May 2028

CGPA: 9.53/10 • Coursework: DSA, OOP, OS, DBMS, Computer Networks, Linear Algebra, Discrete Mathematics

Class XII — Science (CBSE, 92.4%) | Air Force School, Subroto Park | 2024

TECHNICAL SKILLS

- Languages: Python, C++, C, JavaScript
- DSA & Algorithms: Arrays, Trees, Graphs, DP, Binary Search, Recursion, Sorting
- **AI / ML:** Supervised Learning, Neural Networks, CNNs, RNNs, LSTMs, Classification, Regression, Model Evaluation, **Retrieval-Augmented Generation (RAG)**
- Frameworks & Tools: TensorFlow/Keras, Scikit-learn, XGBoost, LightGBM, SHAP, NumPy, Pandas, Matplotlib, Git, Linux
- Systems & Concepts: OOP, Software Design, Concurrency Fundamentals, Multi-threading Basics, Distributed Systems (coursework)

PROJECTS

RAG-Based Adaptive Learning Assistant | AI Project | Ongoing

- Building a RAG pipeline (LangChain + FAISS/ChromaDB) where users upload documents to receive AI-generated explanations, practice questions, and flashcards for active recall
- Architected semantic chunking, vector retrieval, and LLM orchestration for context-aware, difficulty-adaptive responses across multi-format documents

Merchant-Based Fraud Detection System | ML Research Project | 2025

- Designed an end-to-end fraud detection pipeline on 7M+ transaction records with modular architecture and software design principles
- Engineered 25+ features (merchant risk scoring, velocity ratios, temporal signals); fixed temporal leakage via time-aware splits
- Built ensemble models (Random Forest, XGBoost, LightGBM, DNNs) achieving 94%+ F1-score, PR-AUC 0.91; added SHAP interpretability

Next Word Prediction using LSTM | Deep Learning Project | 2024–25

- Architected an LSTM sequence model for NLP next-word prediction (75–80% accuracy) with full tokenization & preprocessing pipeline
- Designed embedding + stacked LSTM architecture with dropout; evaluated using perplexity and accuracy metrics

COMPETITIVE PROGRAMMING/CODING PROFILES

- Solved 200+ Data Structures & Algorithms problems on LeetCode, CodeChef, Codeforces
- Strong understanding of binary search, recursion, dynamic programming, and graph algorithms

ADDITIONAL SKILLS

Languages: English (Fluent), Hindi (Native), German (Basic)
